Aerial Lift Training Ottawa

Aerial Lift Training Ottawa - An aerial work platform is a mechanical access platform. This machine provides access to otherwise not accessible areas for people or equipment. Likewise known as an elevating work platform or aerial device, the machinery is often used to be able to access high places. Construction and maintenance staff often need to make use of aerial work platforms on the job. They are utilized by firefighters for emergency access.

Intended for temporary application, aerial work platforms are distinguished from elevators, that provide permanent access to high areas. An aerial work platform is meant to be operated by a single individual, and could lift weights of not more than one ton. Various kinds have load limits which are higher. There are a variety of types of aerial work platforms; for example, there is a "cherry picker" and a "scissor lift".

Several aerial work platforms come outfitted along with electrical outlets or compressed air connectors for power tools. For specialist jobs, such as lifting frames for window glass, an aerial work platform could come with special tools.

Those who want to operate an aerial lift device must undergo training. Normally, the members of a Health & Safety Committee and their representatives are responsible for the inspection of every machine and work areas and are also required to go through training. Trainees would become familiar with how to utilize an aerial lift device. They would likewise gain an understanding of the rules which apply to the safe operation of these machinery. Regulations vary within different provinces, and within federally regulated worksites.

Workers who are required to be lifted or work near an aerial lifting device should be aware of all the possible dangers. An Aerial Lift Training Video can be shown in a general safety session to educate all of the workers who are lifted by them or work near them.

Aerial Lift Training Program consists of modules focused on the following: Hazard Identification; Aerial Lift Devices and Operating Controls; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The program is designed to train employees on the safe operation of boom-supported, self-propelled elevated work platform and self-propelled, elevated work platform. Employees who complete the program would be given a certificate, signed by somebody qualified to be able to verify the successful completion of a hands-on practical exam.
