Crane Safety Training Ottawa

Crane Safety Training Ottawa - Both crane driver as well as their supervisors need to be aware of all the possible problems associated to the use of an overhead crane. All across North America, there is legislation that provides rules for the safe maintenance, operation and inspection of lifting machinery. Crane Safety courses help owners and managers of cranes accredit their drivers based on the provincial legislation.

Our operator safety training course will provide the crane operator trainee with all the necessary skills and knowledge to be able to make lifting with a crane safer and easier. Operator training truly helps to extend the life of cranes by guaranteeing safe operation and high performance of the crane.

Articulated cranes under 16,000 lbs. capacity could just be operated by accredited operators. Operators must know about the features and operational characteristics of the machine. Prior to use, a pre-operational machine check should be done. There is a legal prerequisite to do a pre-operational check and an inspection of the work-site ground and overhead conditions.

The manufacturer's instructions provide information about inspection and maintenance, unloading and loading of the crane. The law requires annual and daily inspections. Operators have to maintain an up-to-date logbook within most places. They may be required to confirm equipment warranties.

It is suggested that businesses add remote control devices to their cranes. Remote control enhances safety by allowing the operator an easier option for handling the crane.

Prioritizing crane safety helps a company's bottom line. Companies which follow safe equipment practices generally enjoy greater cost savings than those which don't. The risk of machine damage and personal injury is really reduced when a well trained operator is handling the crane. Safety conscious drivers are a lot more productive resulting in reduced times needed for unloading and loading.
