

Manlift Ticket Ottawa

Manlift Ticket Ottawa - The Elevated Platforms and Manlifts Certification course helps to provide the required training on the safe operating procedures, work practice, rules and regulations regarding the daily activities for the operators of this machinery. The course has been designed for individuals who are actively involved in these activities or individuals who have a basic knowledge of this equipment.

In the past couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These machinery provide an easy way to lift staff near what must be done on a stable platform apparatus, enabling staff to carry out tasks with greater comfort and safety rather than being perched on top of scaffolding or ladders.

Similar to every other tool, manlifts are just safe if they are used correctly. Since they lift employees above ground level or floor, accidents could happen easily and this may lead to serious injuries or fatalities for both the manlift operators and any passerby who might be unlucky enough to be standing below.

Manlifts come in a variety of models. Nearly all fit into 1 or 2 categories: the scissor lift, that is capable of moving upward and downward and the articulating boom lift, that could move both vertically and horizontally.
