

## Boom Lift Training Ottawa

Boom Lift Training Ottawa - Aerial platforms or elevated work platforms are devices that enable workers to carry out tasks and duties at elevated heights that will not be otherwise reachable. There are many aerial lifts on the market to perform various applications under different site conditions. If operated carelessly, elevated work platforms can lead to death or serious injury. The most common reasons for related accidents are electrocution, falls, tip-overs and crushed body parts. Lift operators should be fully trained in techniques to prevent accidents during the operation of lifts.

Aerial Lift Safety program is intended for individuals who must operate the devices more effectively and safely. The program provides thorough instruction about the most utilized lifting devices in the business.. Kinds of lift covered comprise boom supported, scissor and articulating aerial lifts. The video presents the right procedures operators should follow. Instruction focuses on pre-operational check, protection against falls, stability of the device and safe driving procedures.

The program addresses equipment reliability and employee safety. All instructional materials are compliant with provincial, state and Government agency requirements and regulations. Training techniques and course management would be taught. The trainer will also become well versed in the technical aspects of aerial lift safety.

Components of the Boom Lift Training program consist of both classroom training and practical training. Both sessions must be completed successfully for the participant to be given a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms could be positioned completely beyond the base of the equipment. The theoretical training component is virtually identical for both kinds. The practical training part can be finished sooner if only one type of machinery is used.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to make more efficient use of elevating work platforms while decreasing the chances of an expensive workplace accident. Trainees would review of applicable rules and business policies, talk about Due Diligence, study Criminal Negligence and consequences to employers, trainers, supervisors and workers. Participants will study equipment features, stability, operating procedures, charging/fueling procedures and parking. Site-specific safety issues will be dealt with.
