Scissor Lift Operator Certification Ottawa

Scissor Lift Operator Certification Ottawa - Regulations in North America usually recommend that operators of booms, scissor lifts or aerial work platforms all acquire operator certification. Scissor lift operator certification is not mandatory, but there are benefits to ensuring that this particular training is provided to all operators.

To be able to enable employees to reach high levels, the scissor lift is a work platform designed along with a pantograph, which is a attached, folding support which shaped in an 'X' pattern. Upward movement occurs when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by elongating the 'X' pattern. A bridge extends from certain platforms to allow convenient access to the work area.

With the release of the manual valve, the platform could descend to the ground. The decsension is achieved by the simple release of pneumatic or hydraulic pressure. This is the key reason that scissor lifts are the best machine at worksites.

Both new and experienced operators can benefit from right scissor lift training. This course can be tailored to focus specifically on the specific equipment models at your worksite. The trainees' certificate of training would list the kinds of machines on which they trained.

The classroom instruction comprises the following topics: rules and guidelines, authorization and attitude; introduction to scissor lift training; Occupational Health safety; safety rules and common dangers; workbook and record of training (or otherwise referred to as ROT)

The conclusion of the in-class section is finished with a written exam.

Practical hands-on training includes instruction on the following: pre-operational check; safety equipment;; regular maintenance; function checklist; operator's instruction manual and the practical session will conclude with a proficiency demonstration.
